

MEDIA RELEASE FOR IMMEDIATE PUBLICATION

Wallop Defence Systems to showcase new countermeasures products at LIMA

Middle Wallop, Hampshire, UK. – 8th November 2011

Wallop Defence Systems, the Hampshire, UK based countermeasures division of the worldwide Esterline Defense Technologies group is showcasing its advanced range of naval and airborne countermeasures capabilities as part of the ADS UK Pavilion Stand A351 at the LANGKAWI INTERNATIONAL MARITIME & AEROSPACE EXHIBITION from 6 - 10 DECEMBER 2011 in MALAYSIA

Wallop Defence Systems staff will be on hand to talk about its comprehensive portfolio of airborne countermeasures including the latest 26mm Chaff and IR flares and the RR180 Dual Shot Chaff cartridge, which effectively doubles the capacity of the dispenser to give increased operational effectiveness by reducing 'on ground' time for reloading.

A new 57mm illuminating flare with a range of 5 kilometres heads up the maritime portfolio, which also includes 102mm chaff and infra red rockets together with a range of marine signals.

The company's new Anti Piracy deterrent TRITON, a simple to use on-board rocket launching system for commercial maritime vessels will be featured on the stand.

TRITON Launches illuminating or noise making rockets up to 1.8km from the ship to alert the pirates they have been discovered before they get close enough to attack

“Piracy is currently costing the global market over \$10billion, Triton is a highly effective, low cost system which gives the user a real and significant advantage in these threat situations. We are looking forward to attending LIMA 2011 and showing our important Asia Pacific markets how Wallop Defence Systems can help them get the best value from their countermeasures budgets.” Commented Dave Connors, Business Development Director of Wallop Defence Systems.

Operationally proven around the globe, Wallop Defence Systems products combine technical innovation, efficient design and a carefully controlled manufacturing process to deliver outstanding performance and low acquisition and through life costs.
